

LAB09-IoT input validation **AI process**

Class: _____ **student ID:** _____ **Name:** _____

1. Clone code example from below modules using ref,site or slide
 - ① module 1 : Saving IoT Sensor Data to an IoT Server's Database
 - ② module 2 :Searching the Saved Database Data in an AI Program for Data Composition
 - ③ module 3 :Validating Input Data in the IoT Server's Database Using an AI Method
- 2.Select IoT software environment/IDE (multiple choice possible)
3. Design IoT software Architecture

Items	Resource			
VM type				
OS				
IP/URL				
Language,version				
framework				
Libraries				
Software tool				
Protocol;				
Message broker				
Software tool				
Container				
Code Reference				

4. Design your coding process (**write used resource**)
5. Execute your process and explain as far as you can (**optional**)
